PROFESSIONAL SUMMARY

Full-Stack Developer with strong expertise in JavaScript, TypeScript, and Python, experienced in building scalable, production-ready applications across modern frontend and backend ecosystems. Proficient with React, Next.js, NestJS, Django, Flask, and FastAPI, with a focus on robust system architecture, API design, and intuitive user experiences.

Focused on AI engineering and agentic application development, building AI-powered systems that integrate LLMs with external tools, APIs, data sources, and software environments. Experienced with Model Context Protocol (MCP), tool calling, structured outputs, AI agents, and modern LLM platforms, with a focus on developing context-aware, autonomous, and task-oriented software workflows.

EMPLOYMENT HISTORY

Full Stack — Web Developer

[Codevider](#) · Tirana

Architecting and maintaining scalable backend systems, specifically using NestJS, including robust RESTful APIs and complex database schemas. Completed advanced generative AI training with AI Hub Albania, focusing on practical applications of RAG systems and graph-based data models. Contributing across the full stack, proactively identifying and resolving UI and logic-based bugs in the frontend.

EDUCATION

Informatics Engineering (Software Engineering)

[European University of Tirana](#) · Tirana

Along with work and personal courses in software development, soft and technical skills, attending EUT (UET) to solidify engineering foundations.

Programim

[Gjergj Canco](#) · Tirana

INTERNSHIPS

Fullstack Developer

[Codevider](#) · Tirana

Began by proactively tackling backend development tasks, then pivoted to support the frontend team to accelerate the project timeline. Instrumental in developing a comprehensive HR management solution, engineering key modules for login, asset management, and leave management, and resolving numerous bugs for a more stable codebase.
